

Healthcare Clearinghouses Reduce Costs, Risks with BNETAL SureDeliver®

If you are a Healthcare Clearinghouse, or a Vendor working with a Clearinghouse that is:

- Using SFTP or FTPS for HIPAA X12 transactions like ERA (X12 835)
- Wanting compliance efforts to not distract from your main business, so have kept ACA compliance remediation on the back burner, or you have one of these:
 - Minimal implementation of the CAQH CORE Connectivity Rules
 - Phase I or II of the Connectivity Rules, but not Phase III and the new Phase IV
 - Yet to implement the Connectivity Operating Rules
- Concerned about the overall cost of compliance and impact on operational overhead

We are here to help! Now, you can immediately benefit from BNETAL SureDeliver® and avoid lengthy and expensive development and testing projects with associated risks. BNETAL SureDeliver® has a turnkey, enterprise grade CAQH CORE Connectivity Rules (Phase I, II, III and IV) implementation, which has been proven for EDI compliance with Affordable Care Act. It easily integrates with your existing X12 processing layer.

BNETAL has been providing expert consultations to CAQH CORE on their Connectivity and Security Operating Rules development since 2006. BNETAL has also provided data exchange solutions and operational expertise to many other national level health-IT projects, with satisfied customers and repeat multi-year business engagements.

We recently helped a Healthcare Clearinghouse use BNETAL SureDeliver® for their ACA compliant connectivity of ERA (X12 835) transactions. They were up and running with SureDeliver® within days of downloading the software, saving them time, money and risks, and allowing them to stay focused on their business.

We can do the same for you! Email us today at Info@BNETAL.com, to schedule a presentation of our capabilities, solutions, or to receive a copy of our whitepaper with more information!
