

Electronic Data Interchange (EDI) Vendors Reduce Costs and Risks, Simplify Affordable Care Act (ACA) Compliance, Improve Robustness and Security with BNETAL SureDeliver®

Are you an EDI vendor that

- is concerned about the overheads of Affordable Care Act related compliance efforts, and wants to make sure they don't distract from your primary business focus?
- realizes that an enterprise grade connectivity and security implementation that is secure, scalable and manageable takes significant connectivity and security development and ongoing senior level expertise which is very expensive?
- can benefit from a robust and turnkey solution to reduce costs and risks, and simplify your (or your customers') compliance?
- can benefit from industry leading expertise on connectivity and security?
- wants to minimize the impact on your revenue cycle management operation?

We can help!

BNETAL offers SureDeliver®, a turnkey enterprise grade solution for Affordable Care Act compliant connectivity and security (CAQH CORE Connectivity Operating Rules) for HIPAA EDI transactions. SureDeliver® is in production and is a proven solution that saves time, costs and risks in achieving compliance, improving operational robustness and security.

NEW: SureDeliver® 8.2 has a ready-now, enterprise-grade, secure and robust CORE Phase IV Connectivity Rule implementation (for Claims and other transactions) in addition to Phase III and II Connectivity Rules implementations.

NEW: See what our customers are saying about SureDeliver® and BNETAL!

NEW: Health Plan and Healthcare Clearinghouse vendors can benefit from an alliance with us to bring your A-game to ACA compliant connectivity projects, reduce your risks and costs of implementation and maintenance, and confidently pursue larger enterprise and infrastructure projects. Ask us about our OEM and Reseller agreements.

With a rich administrative interface for easy installation and configuration, a scalable high performance architecture, advanced security and trading partner configuration, diagnostics, analytical reports and more, SureDeliver® simplifies both implementation and ongoing administration, saving time and cost. SureDeliver® easily integrates with your existing X12

processing layer, acting as a turnkey parallel gateway to existing connectivity approaches such as Secure FTP.

SureDeliver also has turnkey implementations of clinical, pharmacy and public health connectivity and security profiles, enabling additional use cases such as NwHIN connectivity.

BNETAL product SureVigil® complements SureDeliver® by providing proactive monitoring, alerting and reporting on up-time and performance of health data exchanges. This improves robust operation while simplifying compliance with performance requirements for Real Time X12 transactions such as Eligibility and Claim Status.

BNETAL product ManageSecure® complements SureDeliver® by providing digital certificate issuance and life-cycle management, strengthening and simplifying X.509 certificate based authentication for HIPAA EDI transactions.

Supported by top-notch experts in health data exchange, security and regulatory compliance. Contact us today at Info@BNETAL.com to schedule a meeting, or request our [white paper](#).

CAQH® and CORE® are registered trademarks of the Council for Affordable Quality Healthcare, an independent organization. CORE Operating Rules are developed by industry stakeholders using a transparent process. ACA Section 1104 already has language mandating use of CORE Operating Rules (Phase II and III). CORE Phase IV Rules are yet to be adopted by ACA, but are available for voluntary adoption.
