

BNETAL is pleased to announce **SureEDI™ 1.2:** **SureEDI™** which enhances the SureEDI platform, which provides simplified and robust **EDI mapping, parsing, validation and translation** features. The new version includes several features including version control of EDI maps in a multi-user EDI mapping environment, data translations, modular header definition, and enforcement of ASC X12 standard validation constraints.

BNETAL was an invited speaker at the **CDC PHI informatics conference in Atlanta GA**. BNETAL presentation reviewed major national health-IT data exchange initiatives and identified salient features and lessons learned in each that can be used across initiatives to improve outcomes for stakeholders. It also identified ways to improve return on investments by reusing infrastructure and security components across data exchange implementations.

BNETAL is pleased to release **SureDeliver® 8.4**, with a robust implementation of **Secure FTP (SFTP)** as an additional transport option, with the same robust trading partner, security and file transfer management interface it provides for other interoperability standards it already supports. SureDeliver is BNETAL's enterprise gateway software for secure, robust and regulatory compliant EDI and health-IT data exchange. SureDeliver provides turnkey compliance with many health data exchange specifications including robust implementation of the CAQH CORE Connectivity Operating Rules (including **the new Phase IV Rule**).
