

BNETAL is pleased to announce **SureEDI™** : a **SureEDI™** software solution which empowers business EDI users to simplify management and processing of EDI transactions. SureEDI™ gives business users greater control of their EDI to ensure that the right business rules are applied, and processing is more accurate and less error prone. It greatly simplifies trading partner on-boarding, makes EDI processing more reliable, improves efficiency and ROI.

BNETAL Solutions work well with SureDeliver® and SureEDI™

Digital Certificate Issual and Management, Perimeter Security, Strong Authentication, and Security Resource Management. For more information please contact us at info@ManageSecure.net

End-to-End EDI Processing with SureEDI™ and SureDeliver®

SureEDI™ provides robust and simplified EDI data processing independent of the method used for transporting the EDI transactions. SureEDI is built for easy integration with gateway products, and offers turnkey integration with BNETAL's SureDeliver, which offers regulatory compliant EDI connectivity and security. When installed with SureDeliver® or with other transport software, SureEDI provides end-to-end (both processing and transport) EDI capability. [Read More](#)

Remote and continuous monitoring of web-servers, web-services and health data exchanges. It not only checks for up-time, it also does deep validation of message envelope and security, and alerts on error conditions and performance degradation. For more information please contact us at Info@SureVigil.com.

SureDeliver® is BNETAL's flagship gateway for secure, robust and regulatory compliant EDI and health-IT data exchange. SureDeliver 8.3 has turnkey integration with BNETAL SureEDI™ for end-to-end processing, and robust implementation of CAQH CORE Phase IV Operating Rule, in addition to previous phases of Connectivity & Security Operating Rules.
